Project Name	Project -Hazardous area monitoring for industrial plant powered by IoT

Creating NODE-RED Service

- Node-RED is a flow-based development tool for visual programming developed originally by IBM for wiring together hardware devices, APIs and online services as part of the Internet of Things.
- Node-RED provides a web browser-based flow editor, which can be used to create JavaScript functions. Elements of applications can be saved or shared for re-use.
- The runtime is built on Node.js.
- The flows created in Node-RED are stored using JSON.

Social Development:

- The flows created in Node-RED are stored using JSON which can be easily imported and exported for sharing with others.
- An online flow library allows you to share your best flows with the world.

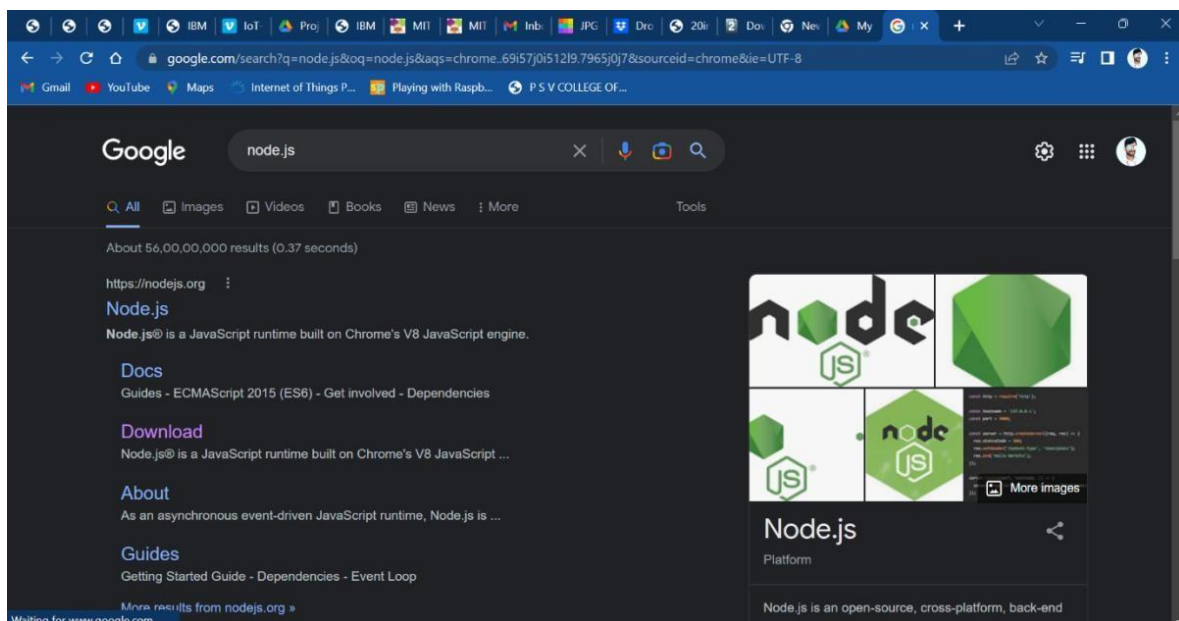

Step1: go to nodejs website and download .msi file in downloads page.

Step2:run the .msi file and install the nodejs.

Step3: install nodered in command prompt: `npm install -g --unsafe-perm node-red`

Step4: type node-red in cmd and u will get the local server link, just open it.

2 Nov 10:41:58 - [warn] Projects disabled : editorTheme.projects.enabled=false
2 Nov 10:41:58 - [info] Flows file : \Users\T.S.KAVIN\.node-red\flows.json
2 Nov 10:41:58 - [info] Server now running at http://127.0.0.1:1880/
2 Nov 10:41:58 - [warn]

-----
Your flow credentials file is encrypted using a system-generated key.

If the system-generated key is lost for any reason, your credentials
file will not be recoverable, you will have to delete it and re-enter
your credentials.

You should set your own key using the 'credentialSecret' option in
your settings file. Node-RED will then re-encrypt your credentials
file using your chosen key the next time you deploy a change.
-----

2 Nov 10:41:58 - [info] Starting flows
2 Nov 10:41:58 - [info] Started flows
```

Thus we created NODE-RED Service.
